

The Unicode Atlas

A complete index of every block in the Unicode Standard, plus rendered character samples

346 named blocks · 286,719 assigned code points · 1,114,112 total code points in the codespace

The ASCII Table

The original 7-bit character set (codes 0–127), laid out the way ASCII reference charts have always been printed. Codes 0–31 and 127 are non-printing control characters, shown by their standard abbreviation; code 32 is the space character.

The Extended ASCII Table

Codes 128–255. There is no single official “extended ASCII” — several incompatible 8-bit code pages have used this upper half over the years (raw ISO-8859-1/Latin-1 leaves 128–159 as unprintable control codes; the original IBM PC used code page 437 with box-drawing glyphs instead). This table uses **Windows-1252**, the version most people mean today — it fills 128–159 with printable characters like smart quotes, dashes, and the euro sign. Five code points (81, 8D, 8F, 90, 9D hex) are undefined even in Windows-1252 and are marked accordingly.

Dec	Hex	Oct	Binary	Char	Dec	Hex	Oct	Binary	Char	Dec	Hex	Oct	Binary	Char	Dec	Hex	Oct	Binary	Char

Table of Contents

Every entry below is a live link — click a title or page number to jump straight there. The 54 indented entries near the end are the individually rendered Unicode blocks, including two Chinese-character blocks. One of them, CJK Unified Ideographs, is far too large to show in full, so it's capped to a representative sample (noted where it appears).

About this document

This document was generated directly from the Unicode Character Database bundled in the environment that built it (Python's **unicodedata** module reports UCD version 15.0, layered with a newer block map from the **fontTools** library that already includes blocks added in Unicode 16.0 and 17.0). Every number on the following pages — block ranges, code point counts, assigned-character counts — was computed by scanning all 1,114,112 possible code points, not looked up from a summary.

A caveat worth stating plainly: because the block map is newer than the character-assignment data, 19 very recently added blocks (things like Todhri, Garay, Sunuwar, and two new CJK Unified Ideographs extensions) show as 0 assigned characters below. They are real, encoded blocks in current Unicode — this document's category data simply predates their contents. Those rows are marked with an asterisk in the index.

Why most of Unicode isn't shown as glyphs: rendering an actual character requires a font that contains its glyph. This document uses DejaVu Sans for most blocks — a broad but ordinary system font covering Latin, Greek, Cyrillic, Armenian, Georgian, and a long tail of symbol blocks — plus WenQuanYi Zen Hei, an open-source Chinese font, specifically for the two CJK blocks below. Together they cover 54 of the 346 named blocks with real glyphs. The rest — shaped Arabic, most Indic scripts, color emoji, Hangul Syllables, and the other CJK Unified Ideographs Extensions — are catalogued in the index but not rendered, because doing so faithfully would need dozens more specialized fonts this environment doesn't have. Even with the right font, CJK Unified Ideographs (20,940 renderable characters) is capped to a 2,000-character sample below purely to keep this document from running hundreds of pages longer.

That gap is itself the point: the ASCII and Extended ASCII tables at the front of this document are 128 characters each, one page apiece. The real Unicode standard is the index that follows.

The scale of it

Total code points in the Unicode codespace (U+0000–U+10FFFF)	1,114,112
Named blocks	346
Assigned characters (graphic + format + control + private-use)	286,719
Surrogate code points (not real characters, UTF-16 plumbing)	2,048
Unassigned / reserved code points	825,345 (74%)
Planes in use (of 17 possible)	8

Every code point, by general category

Category	Meaning	Count
Cn	Unassigned	825,345
Co	Private Use	137,468
Lo	Other Letter (incl. CJK, Hangul, Arabic, etc.)	131,612
So	Other Symbol	6,634
Ll	Lowercase Letter	2,233
Cs	Surrogate	2,048
Mn	Nonspacing Mark	1,985
Lu	Uppercase Letter	1,831
Sm	Math Symbol	948
No	Other Number	915
Nd	Decimal Digit	680

Complete index of all 346 Unicode blocks

Every named block in the Unicode Standard, in code point order. “Sample” marks the 54 blocks rendered with real glyphs later in this document (including two Chinese blocks, one of them capped to a sample due to its size). An asterisk (*) marks a block newer than this environment's character-assignment data (see previous page).
